

Final Report

Jacob Vander Wilt

CS 460-01, Fall 2022

Cross Country Race Simulator

What does it contain?

The zip file I submitted contains two folders `race_predictor` and `user_interface` plus a `makefile` and `README.md`. The `md` file contains all the info on what you need to set up the project and how. `race_predictor` contains all the scrapy code that is used to create the database. `user_interface` contains all the code along with the database that is used to run the streamlit app.

Final Status?

The project is in working order. It is not 100% but it is able to run at a base level and I believe is in a position where the only thing needing updated is the race algorithm. So, with that being said two thirds of my main goals are complete with the algorithm and the course difficulty rating being the missing parts.
